

Britive & SailPoint Cloud Connector

Integrate Britive's cloud-native PAM with SailPoint Identity Security Cloud (ISC) to automate identity governance and privileged access provisioning.

Use SailPoint as your system of record while Britive enforces policy-based access that expires automatically. SailPoint handles lifecycle and certifications. Britive delivers JIT + ZSP by default across the entire environment.

Access is granted just-in-time, scoped by policy, and revoked at runtime. Supports human, non-human, and autonomous AI identities. No vaults. No jump boxes. Nothing to install.

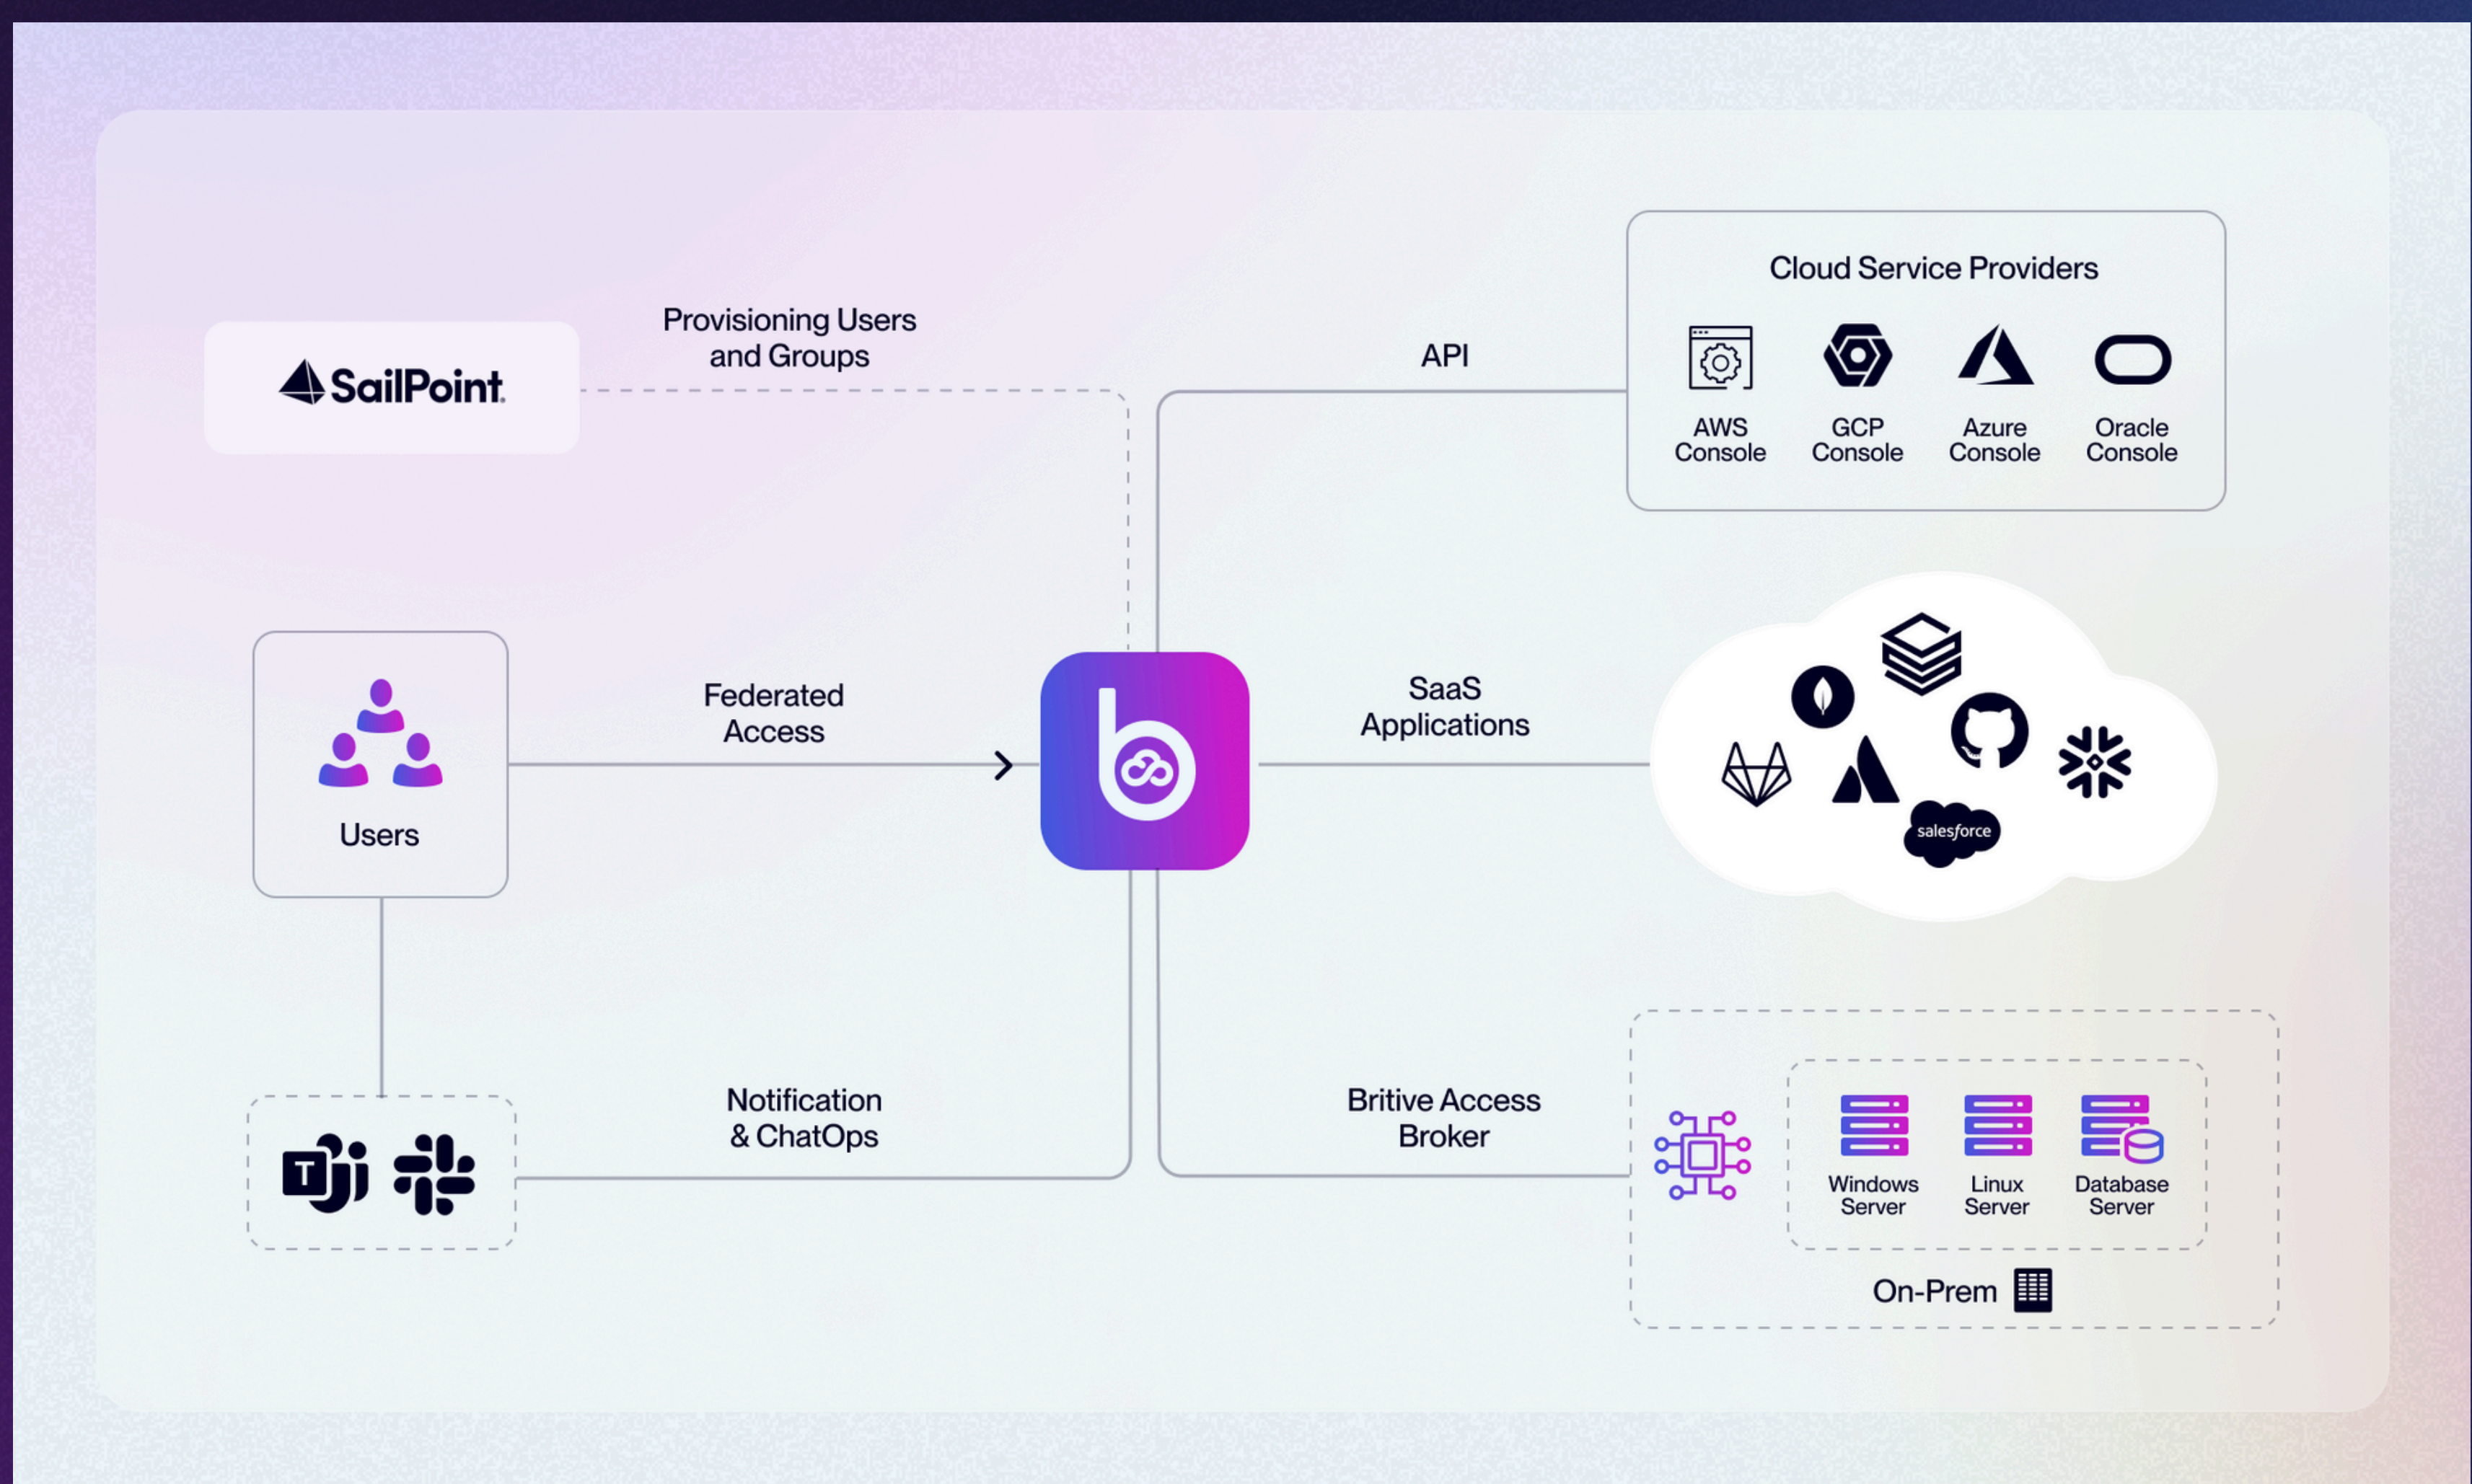

Unify Access Management

SECURE EVERY IDENTITY
ACROSS YOUR ENTIRE
ENVIRONMENT

Confidently see who or what
has access to which assets,
everywhere.

Eliminate the pervasive risk of
standing access with Zero
Standing Privileges (ZSP)
enforced by default.

Give DevOps and CloudOps
access that enables velocity,
not workarounds that
continue to introduce risk.

KEY INTEGRATION FEATURES

Full Account Lifecycle Management	Create, read, update, delete, enable, and disable user accounts in Britive. Existing users in SailPoint can be managed directly through Britive for comprehensive, unified access management across the entire lifecycle.
Centralized Identity Governance	Establish a single source of truth for user identities across privileged access systems. The bidirectional sync between SailPoint and Britive automatically populates updates to users and permissions across both platforms.
Automate Privileged Access	Automatically assign privileged access from SailPoint roles and approvals, then have Britive deliver it just-in-time and with ephemeral time-constraints. Access expires automatically and is revoked at runtime, enabling Zero Standing Privileges by default. Run periodic certifications in SailPoint, and use controlled break-glass with full audit evidence when emergencies require escalation.
Secure Authentication & Authorization	Secure every identity with authorization decoupled from authentication. Your IdP authenticates users. Britive performs authorization at runtime using policies and Britive entitlements mapped from SailPoint without the need for endpoint agents, vaulted credentials, or proxies.
Comprehensive Logging	Maintain a full audit trail of all operations for all access profiles managed through Britive. Streamline access certification campaigns with manager attestation and support compliance for SOX, PCI DSS, GDPR, and other regulatory requirements.

ENABLING YOUR MODERN COLLABORATIVE ENTERPRISE

Secure Access for Every Identity
Confidently oversee access management and enforcement across the evolving identity landscape.

Seamless Collaboration and Management
Eliminate manual provisioning workflows to facilitate innovation without sacrificing security.

Eliminate Standing Access Risks
Enable ZSP by default with access that's provisioned upon request and automatically revoked upon completion.

BUILT FOR SECURITY, CHOSEN FOR AGILITY

-  **Eliminate Always-On Access Risk**
Enable JIT, ephemeral permissions alongside governance. Access exists only when needed and expires automatically.
-  **One View, One Policy, Every Identity**
Centralize identity context and certifications while enforcing runtime policy for all identities across every environment.
-  **Deploy Fast, Scale Simply**
SaaS-based, API-first, and agentless. No vaults, no jump boxes, nothing to install and maintain. Map Britive entitlements to SailPoint seamlessly.

-  **Simplify Compliance, Strengthen Security Posture**
Attestations and full audit trails keep you ready for internal and external compliance requirements without slowing teams down.
-  **Move Fast Without Sacrificing Security**
Enable innovation without compromising security. Give teams the access they need while enforcing secure access policies.
-  **Built for Every Environment**
Built to secure cloud-native environments, on-premises networks, SaaS applications, and even hybrid deployments.

SECURING ACCESS
FOR INDUSTRY LEADERS
